- b) the molar ratio of compound II to compound I is less than 2 when compound I is trifunctional;
- c) the amounts of units derived from all carboxylic acids and amines in the polyamide satisfy formula

$$P < 1 / [(F_A - 1) (F_B - 1)]$$
 (1)

where

$$P = [\Sigma (n_i f_i)]_X / [\Sigma (n_i f_i)]_Y$$
 (2)

where  $P \le 1$  and either X = A and Y = B, or X = B and Y = A, and

$$F_x = \sum (n_i f_i^2) / \sum (n_i f_i)$$
 (3)

for, respectively, all carboxylic acids (X = A) and all amines (X = B), where  $f_i$  is the functionality of either the carboxylic acid  $(f_i = v_i)$  or amine  $(f_i = w_i)$ ,  $n_i$  being the number of moles of the carboxylic acid or amine and the summation involving all units derived from carboxylic acids and amines in the polyamide.

(Cancelled)

(Previously Amended): The polyamide according to claim 1, wherein the functionality of compound I is 2.

4. (Original): The polyamide according to claim 3, wherein at least a unit derived from monofunctional carboxylic acid or amine is present.

5. (Previously Amended): The polyamide according to claim 3, wherein compound I is terephthalic acid or 1, 6-hexa-methylene diamine.

(Previously Amended): The polyamide according to claim 3, wherein compound II is 1, 3, 5-tris (caproic acid) – melamine, trimesic acid or bis (hexamethylene triamine).

18

B

- 7. (Original): The polyamide according to claim 1 wherein the AB monomer is an  $\alpha$ ,  $\omega$  amino acid and/or a lactam.
- (Previously Amended): The polyamide according to claim 7, wherein the lactam is  $\delta$ -caprolactam.
- (Previously Amended): A process for the preparation of a polyamide film comprising forming a film from a polyamide according to claim 1.
- 10. (Previously Amended): A fiber, film, foam or molded article formed from polyamide according to claim 1.
- 1. (Previously Amended): A film formed from a polyamide according to claim 1.
- (Previously added): A process for preparing intrinsically gel-free, randomly branched polyamides comprising:

A. selecting:

- i) at least one AB monomer having both a carboxylic group (A) and an amine group (B);
- ii) at least one compound I, being a carboxylic acid  $(A_v)$  having a functionality  $v \ge 2$  or an amine  $(B_w)$  having a functionality  $w \ge 2$ ;
- iii) at least one compound II, being a carboxylic acid  $(A_v)$  having a functionality  $v \ge 3$  or an amine  $(B_w)$  having a functionality  $w \ge 3$ , compound II being a carboxylic acid if compound I is an amine or compound II being an amine if compound I is a carboxylic acid;
- B. determining the ratio of units derived from all carboxylic acids and amines in the polyamide using the following formula

$$P < 1 / [(F_A - 1) (F_B - 1)]$$
 (1)

where

$$P = [\Sigma (n_i f_i)]_x / [\Sigma (n_i f_i)]_Y$$
 (2)

where  $P \le 1$  and either X = A and Y = B, or X = B and Y = A, and

i e

C

$$F_x = \sum (n_i f_i^2) / \sum (n_i f_i)$$
 (3)

for, respectively, all carboxylic acids (X = A) and all amines (X = B), where  $f_i$  is the functionality of either the carboxylic acid  $(f_i = v_i)$  or amine  $(f_i = w_i)$ ,  $n_i$  being the number of moles of the carboxylic acid or amine and the summation involving all units derived from carboxylic acids and amines in the polyamide; and

C. polymerizing said at least one AB monomer, said at least one compound I and said at least one compound II in the ratio determined by step B to form an intrinsically gel-free polymer.

1/23. (Previously Added): The process of claim 1/2, wherein

- a) the ratio of compound II to compound I is less than 1 where compound II is trifunctional and compound I is bifunctional; or
- b) the ratio of compound II to compound I is less than 2 when both compound I and compound II are trifunctional.

14. (Previously Added): The process of claim 22 wherein the process is continuous.

17. (Previously Added): The process of claim 13 wherein the process is continuous.

(Currently Amended): A process for preparing intrinsically gel-free, randomly branched polyamides comprising:

A. selecting:

- i) at least one AB monomer having both a carboxylic group (A) and an amine group (B);
- ii) at least one compound I, being a carboxylic acid  $(A_v)$  having a functionality  $v \ge 2$  or an amine  $(B_w)$  having a functionality  $w \ge 2$ ;
- iii) at least one compound II, being a carboxylic acid  $(A_v)$  having a functionality  $v \ge 3$  or an amine  $(B_w)$  having a functionality  $w \ge 3$ , compound II being a carboxylic acid if

 $\mathcal{B}'$ 

30381055vI

compound I is an amine or compound II being an amine if compound I is carboxylic acid; and

- iv) optionally, at least one compound III, being a monofunctional carboxylic acid or a monofunctional amine;
- B. determining the amounts <u>ratio</u> of units derived from all carboxylic acids and amines in the polyamide according to any one of the compositions defined by the non-shaded regions depicted in figures 1 through 8 using the following formula

for, respectively, all carboxylic acids (X = A) and all amines (X = B), where  $f_i$  is the functionality of either the carboxylic acid  $(f_i = v_i)$  or amine  $(f_i = w_i)$ ,  $n_i$  being the number of moles of the carboxylic acid or amine and the summation involving all units derived from carboxylic acids and amines in the polyamide; and

- C. polymerizing said monomers in the amounts determined in step B at least one AB monomer, said at least one compound I, and said at least one compound II, and optional said at least one compound III to form an intrinsically gel-free randomly branched polyamide.
  - 17. (Currently amended): The process of claim 16, wherein
- a) the ratio of compound II to compound I is less than 1 where compound II is trifunctional and compound I is bifunctional;
- b) the ratio of compound II to compound I is less than 2 when both compound I and compound II are trifunctional.
- 18. (Previously added): The process of claim 19 wherein the process is continuous.

continuous.

20. (Canceled)

21. (Canceled)

(Canceled)

22.

(Previously added): Intrinsically gel-free, randomly branched polyamide comprising at least units derived from:

AB monomers, which monomers have both a carboxylic group (A) and an amine group (B);

The process of claim / wherein the process is

at least one compound I, being a carboxylic acid  $(A_v)$  having a functionality  $v \ge 2$  or an amine  $(B_w)$  having a functionality  $w \ge 2$ ;

at least one compound II, being a carboxylic acid  $(A_v)$  having a functionality  $v \ge 3$  or an amine  $(B_w)$  having a functionality  $w \ge 3$ , compound II being a carboxylic acid if compound I is an amine or compound II being an amine if compound I is a carboxylic acid,

wherein at least one of compounds I and II comprises a carboxylic acid  $(A_v)$  or an amine  $(B_w)$  having a functionality v or w chosen from 4, 5, or 6 and the amounts of units derived from all carboxylic acids and amines in the polyamide satisfy the following formula:

$$P < 1 / [(F_A - 1).(F_B - 1)]$$
 (1)

where:

$$P = [\Sigma (n_i.f_i)]_X / [\Sigma (n_i.f_i)]_Y$$
 (2)

30381055v1

where  $P \le 1$  and either X = A and Y = B, or X = B and Y = A, and

$$F_{x} = \sum (n_{i}.f_{i}^{2}) / \sum (n_{i}.f_{i})$$
 (3)

for, respectively, all carboxylic acids (X = A) and all amines (X = B), where  $f_i$  is the functionality of either the carboxylic acid  $(f_i = v_i)$  or amine  $(f_i = w_i)$ ,  $n_i$  being the number of moles of the carboxylic acid or amine and the summation involving all units derived from carboxylic acids and amines in the polyamide.

Q 24. (Previously added): Intrinsically gel-free, randomly branched polyamide comprising at least units derived from:

AB monomers, which monomers have both a carboxylic group (A) and an amine group (B);

at least one compound I, being a carboxylic acid  $(A_v)$  having a functionality  $v \ge 2$  or an amine  $(B_w)$  having a functionality  $w \ge 2$ ;

at least one compound II, being a carboxylic acid  $(A_v)$  having a functionality  $v \ge 3$  or an amine  $(B_w)$  having a functionality  $w \ge 3$ , compound II being a carboxylic acid if compound I is an amine or compound II being an amine if compound I is a carboxylic acid;

optionally, at least one compound III, being a monofunctional carboxylic acid or a monofunctional amine;

wherein at least one of compounds I and II comprises a carboxylic acid  $(A_v)$  or an amine  $(B_w)$  having a functionality v or w chosen from 4, 5, or 6.
